**Shipping Challenge** - How might we calculate really large amounts? What’s a reasonable estimate?

**Focus** - Adding and multiplying whole numbers and fractions.

Name: ______________________________

Arii wonders how many confections can fit in one delivery truck.

Can you help him figure it out?

Here is the data he collected.

How might you enter this problem?

Try to visualize 12 confections in one box. Consider drawing a diagram of how that might look.

**Drawing it out** and **recording important numbers** will help you get started with this challenge.

Use extra paper as needed. Can you try each of the following?

1. Draw it out.  
2. Record equations.  
3. Explain your process in words.
